Pioneering Agentic AI for Patient Assistance Programs

Deploying Nova 2 Sonic AI voice agents and automated SMS campaigns to automate patient support, achieving 14% AI containment and an 84.3% quality score from Day 1 with zero Sev1 incidents.

THE CHALLENGE

- Patient Assistance Program required AI-first automation without compromising empathy or care quality
- Specialty pharmacy prescription management was entirely manual and resource-intensive
- No automated patient engagement—all outreach was handled by human agents
- Project timeline compressed by one month due to customer mandated deadlines
- Changing and inconsistent test data during build and UAT phases

THE SOLUTION

- Built and deployed 2 Nova 2 Sonic AI voice agents for patient hub and specialty pharmacy
- Integrated Amazon Bedrock and Amazon Q for intelligent, knowledge-driven responses
- Deployed outbound SMS and voice campaigns for proactive patient engagement
- Built SMS bot for inbound prescription refill requests and outbound status updates
- Integrated with the client's Engagement Platform (CRM) and Enterprise Pharmacy System
